                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A B-cell superantigen (349) is a fragment of SpA D domain that specifically binds the Fab portion of variable region restricted antibodies. The SAG is used to enhance production of VH, especially VH3, restricted Abs. During attempts to identify sAGs, as sequences (R54784-801) of H chains from Ig reactive with mod-SpA, and as and DNA sequences (R54802-16, G6482-56, of VH regions of SpA binders obtained from combinatorial libraries were determined. IgM protein RAS is derived from the germline configuration of a VH gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 vhlv-qsgaevkkpgssvkvsckasggtfssyaiswvrqapggglewmggiipifg--g- 56

additional N-linked qlycosylation sites are introduced at locations which impair complement fixing and Fc receptor binding ability. They are preferably located in the CH2 region of the Iq molecule. Antibodies bearing multiple sialyl-Lex determinants are useful for disrupting undesirable interactions between cells or proteins. Disrupting this interaction has therapeutic applications, for example, in minimising inflammation following tissue injury. Sequence 481 AA:

The sequence given in Kil023-24 represent the heavy and light chaims. The sequences given in Kil023-24 represent the heavy and light chains of Antibody D is a monoclonal antibody Which of Antibody D is closely related in nature (HMV) sero positive patient. Antibody D is closely related in nature of murine antibody BBB3. Total RNA was sisolated from antibody D beaverssing cells and polydemylated RNA was extracted. These polyARN's were used to prepare a cDNA library which was screened for human Rappa light (L) chains and two positive clones were detected. Sequence 476 AA:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     79 ysqnf-q---grvtitadkststahmeltsirsedtavyycatdryrqanidrarvqwid 144 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:11 | 1:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This polypeptide sequence comprises the heavy chain variable region (VH), Habli, obtained by mutagenesis of the VH CDR's fhuman article sequence comprises the heavy chain variable region (VH), Habli, obtained by mutagenesis of the VH CDR's fhuman carcinoembryonic antipen (hCBA) specific antibody CEA6 (see W19881). A claimed specific binding member (A) comprises an hCEA specific antibody antigen binding domain that has a dissociation constant for hCEA of less than 1 x 10 -8 M, is non-cross-reactive with human liver cells, and preferentially binds to the A3-B3 cextracellular domain of hCEA and/or to cell-associated hCEA over hCEA over soluble hCEA. Preferred (A) include pairings of VH and VL sequences from CEA1-7 (see W1987-65), or their CDR sequences, as well as CEA6 VH and VL variants (see W19886-95) obtained by mutagenesis or chain shuffling. An example of a claimed pairing is HBB11 VH with CEA6 VL. (A) is used to detect cells expressing hCEA, in vivo or in vitro, especially tumour cells for diagnosing cancer of a gament of the colon, lung or breast.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      60 yaq----kfqgrltitadeststaymelsslrsedtavyycarhnhny-el-yyy--ymd 111

L- and H-chain DNA was amplified by PCR from Graves' orbital tissue and clones encoding autoimmune-associated immunoglobulin fragments were obtained. 13/15 clones of H chain (1961) genes showed homology to the closest germline genes, DF12 (202127) and PRIZOR (SP3228). The DNA (2003229) and corresp. amino acid (PRIZOR) sequences of the VH region of a representative clone, Sequence. 98 AA;
                                                                                                                                                     Graves ophthalmopathy associated immunoglobulin protein; orbital antigen; monoclonal antibody; heavy chain; H chain; variable region; autoimmunity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               W19881;
07-DEC-1997 (first entry)
CEA-specific antibody CEA6 VH sequence.
Carcinocmbryonic antigen; CEA; human; antibody; scFv;
tumour marker, lung cancer, breast cancer, colon cancer;
adenocarcinoma; diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /note= "complementarity determining region 3"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 /note= "complementarity determining region 1"

```
This polypeptide sequence comprises the heavy chain variable region (VH), HBB5, obtained by mutagenesis of the VH ChR3 of human carcinomehryonic antigen (hCBA) specific antibody CEAG (see W1988). A claimed specific binding member (A) comprises an hCEA specific antibody antigen binding domain that has a dissociation of constant for hCBA of less than 1 x 10 - 8 M, is non-cross-rearrive with human liver cells, and preferrentially binds to the A3.8 sectionally of hCEA and/or to cell-associated hCEA over the A3.8 sectional domain of hCEA and/or to cell-associated hCEA over soluble hCEA, Preferred (A) include pairings of the A3.8 section CEA1-2 (see W19876.85), or their CDR sequences as well as CEA6.9 W with CEA6.9. An example of a claimed by mutagenesis or chain shuffling. An example of a claimed by the CEA6, in vivo or in vitro, especially tumour cells for diagnosing cancer e g adenorarcingma of the colon lung or breast.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  60 yaq----kfqgrltitadeststaymelsslrsedtavyycaqrshty el-yyy--ymd lil

This polypeptide sequence comprises the heavy chain variable region
(VH), HBA11, obtained by mutagenesis of the VH CDR3 of human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Wri: 97-319779/29.
Specific binding members for human carcinoemblyonic antigen - bind
to the A3-B3 extracellular domain of hCEA and are substantially
non-cross-reactive with human liver cells; used for diagnosing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   non-cross-reactive with human liver cells; used for diagnosing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Length 12:

carcinoembryonic antiqen (hZEA)-specific antibody CEA6 (see N19881). "A claimed specific binding-member (A) comprises an hCEA specific antibody antiqen binding-domain that has a dissociation constant for hCEA of less than 1 x 10 - M is non-cross-reactive with human liver cells, and preferentially binds to the A3-B3 extracellular domain of hCEA and/or to cell-associated hCEA over acluble hCEA. Preferred (A) include pairings of VH and VL sequences from CEA1- (see W19876-85), or their CDR sequences, as well as CEA6 VH and VL variants (see W1986-55) obtained by mutaquenes; or chain shuffling. (A) is used to detect cells expressing hCEA, in vivo or in vivro, especially tumour cells for diagnosing cancer, e.g. adenocarrinoma of the colon, lung or breast.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       claim 4; Fig 2; 128pp; English.

This polypeptide sequence comprises the heavy chain variable region (VH), ToEDIO, obtained by mutagenesis of the VH CDR3 of human carcinoembryonic antiqon (ACEA) specific antibody CEA6 (see W1981). A claimed specific binding member (A) comprises an HCEA specific antibody antigen binding domain that has a dissociation constant for hCEA of less than 1 x 10 - 8 M, is non-cross-reactive with human liver cells, and preferentially binds to the A3-B3 extracellular domain of hCEA and/or to cell-associated hCEA over
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Specific binding members for human carcingembryonic antigen - bind to the A3-B3 extracellular domain of hCEA and are substantially non-cross-reactive with human liver cells, used for diagnosing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Carcincombryonic antigen: GEA; human; antibody; soPv;

A human anti-Variceala zoster virus monoclonal antibody was prepd.
using the tricma method of Ostborg ot al. (1983) Hybridoma 2.461-367.
One resultant trioma neutralised VZV in the absence of complement.
This cell line, designated cell line 1C95RAP, produced an antibody designated 93RAP or the light and heavy chain variable region penes of the 93RAP antibody were cloned using PCP. At least two heavy chain (gamma-1) and two light chain (kappa) specific clones sequence (300 082749 $ Q82750 respectively).

hdEA over soluble hdEA. Freferred (A) include pairings of VH and VL sequences from CEA1-7 (see W19876-85), or their CDR sequences, as well as CEA5 VH and VL variants (see W1986-95) obtained by mutagenesis or chain shuffling. Examples of claimed pairings are TC5D10 VH with TC5D12 or CEA6 VL. (A) is used to detect cells expressing hdEA, in vivo or in vitro, especially tumour cells for diagnosing cancer, e.g. adenocarcinoma of the colon, lung or breast.

A process for isolating and synthesising human monoclonal anti-tumour antibodies has been produced. The process involves: (a) constructing at antibodies has been produced. The process involves: (a) constructing at least one fusion phage library from the peripheral blood lymphocytes to the page library in a binding assay with cultured tumour cells of the same type as the patient; (b) screening for anti-tumour antibodies in thype as the patient's tumour; (c) removing extraneous antibodies by absorption against normal human cells. (d) cloning the phage selected in step (b) and (c); (e) assaying the specificity of the cloned phage by incubating the phage with at least two types of cultured normal cells; and (f) further testing the specificity of cloned phage that do not bind continued tumour cells derived from more than one other tumour that is not the patient's tumour. The present sequence represents a human heavy chain antibody, from a VH antibody fusion phage library, produced by a method as described above. The antibodies produced can be used for the human antibody studies and for isolating tumour may be human and for isolating tumour may be human antibodies to studying tumour patient's the patient's the antibodies produced can be used for the human antibodies to studying tumour may an incompany the second continued to the human antibodies produced can be used for the human antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              .,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        murine monoclonal antibodies (MAbs). Since the antibodies are isolated from fusion phage libraries, their affinity and specificity for a tumour cell line can be improved by genetic manipulations.

Claim 6: Page 20-23: 34pp; English.
The monoclonal antibodies (MAb's) designated GP13, GP44 and GP68
react with HIV-1 gp120 giyopotein variants containing the amino-
acids Asn88. Lys17, Asn262 and Tyr 435 but exhibit at loss forware reacced reaction with gp120 variants in which those amino acids have been deleted or substituted. The MAb's are useful to passive immunotherapy and their anti-idiotypic antibodies can be useful in the production of vaccines.

                               by molecular cloning of immunoglobulin genes by PCR I become to the base of 94pp. English.

1. and H-chain DNA was amplified by PCR from Graves' orbital tissue and chones encoding auroimmune-associated immunoglobulin fragments were obtained. 13/15 clones of H chain (IGG1) genes showed homology to the DNA (089329) and corresp. DP10 (089327) and hv1262 (089328). The DNA (089329) and corresp. DP10 (089327) and CP7H1.2, are provided.

Sequence 98 AA:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         vector lambda FIX II was screened with the human VHI family specific oligonucleotide (see Q22418). Phage clone lambda 49.8 was isolated and a 6.1 kb Xbai fragment congo. the variable segment VH49.8 subcloned into pNU3 to generate plasmid pVH49.8. An 800 bp region of this insert was sequenced. VH49.8 was found to have an open reading frame which encoded the sequence shown.

Example 12, Fage 96, 196pp, English.

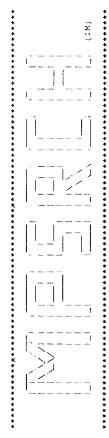

A human placental genomic DNA library cloned into the phage vector lambda FIX II was screened with the human VH1 family specific oligonucleotide Q44184. Phage clone lambda 49.8 was isolated and a fib Xbal fragment containing the variable, segment VH49.8 was subcloned into pNNO3 to generate plasmid pVH49.8 An 800bp region of this insert was sequenced (Q44185) and VH49.8 found to have an open reading frame and inteat splicing and recombination signals, indicating that the gene is functional. Amino acid sequence Q44185 was deduced from the coding sequence; the last 3
                                                                                                                                                                                                                              Transgenic non-human animals contg. immunoglobulin heavy chain trans gene . used to produce useful antibodies by isotype
